

Regina Imhoff  
CS 161 Summer 2014  
Assignment 1

I'm Regina Imhoff from Austin, Texas. I have a BS in Medical Technology from Michigan State University. I've been working in clinical cytogenetics since 2007. I've been using Python in my work making databases for the large number of digital photos we take of tumor cells. I found I really enjoyed programming and hope to make a career shift after I finish the post-bacc program.
